

**THE
CLIENT**

Department of Defense

The goal of this effort incorporated the investigation of some of the performance impacts of Unicode, as well as some of the processes and procedures related to Unicode within the context of the Agency's selected technical infrastructure.

**THE
TECHNOLOGY**

SAP

- SAP ECC 5.0
- BW 3.5
- SRM 3.0
- SAP Content Server 3.0
- Enterprise Portal 6.0

**THE
CHALLENGE**

Our client needed a Senior Technical Consultant to complete one of the largest known ERP implementations in the world.

**THE
SOLUTION**

In support of a major Defense Agency, the Squires Group provided a Senior Technical Consultant to complete one of the largest known ERP implementations in the world. Due to our expertise, we were able to contribute to this highly complex technical and logistical implementation and handle challenges surrounding the installation, implementation and technical support of the Agency's SAP solution.

We helped identify, plan and execute the implementation of SAP applications and related technical infrastructure. A main area of importance was the Unicode Migration services related to the installation and implementation of NetWeaver and the ECC 5.0 ERP Platform. The goal of this effort incorporated the investigation of some of the performance impacts of Unicode, as well as some of the processes and procedures related to Unicode within the context of the Agency's selected technical infrastructure. We also implemented and supported Service Relationship Management (SRM) and Business Warehouse (BW) applications.

**THE
SUCCESS**

The client was able to execute a Disaster Recovery plan to establish the necessary off-site redundancy, security and recovery capability for critical SAP Platform infrastructure.

**THE
TESTIMONIAL**

"The Squires Group went the extra mile to understand our company's culture and needs to better identify the right match for us".
