

**THE
CLIENT**

Federal Agency

Our client's program is part of an overall effort to share critical business and mission-related information with key audiences including: federal, state, and local law enforcement, foreign partners, intelligence, defense, homeland security and the private sector.

**THE
TECHNOLOGY**

- IBM Rational Tools
- XML
- SQL
- Microsoft Office
- Web Browser
- Linux Shell program
- Informatica
- Oracle Business Intelligence
- Oracle
- DB2 Databases
- Crystal Reports
- AIX
- Java

**THE
CHALLENGE**

The program encompasses the full range of application development services and infrastructure support including: the use of various approaches for application development, testing, design and support of non-production environments, application development, organizational consulting and related business process reengineering, release management, and related program management.

THE SOLUTION

The Squires Group, Inc. was able to provide experienced professionals that were able to understand the new requirements and issues, test different components, and develop and execute test cases. By running through the functional requirements, our consultants were able to build ETL processes to load data warehouses and support Business Intelligence development. Our development team is skilled in IBM Rational Tools, XML, SQL, Informatica, Oracle and DB2 Databases, AIX, and Java. Their abilities allow them to report on travel security gateways through Data Warehousing and Business Intelligence, and to thoroughly understand, synthesize, and act on the underlying information in the source systems.

THE SUCCESS

Our client now has a robust and user friendly user interface that allows them to qualify issues sooner, meaning fewer problems getting into Production. The client now has the ability to perform manual reviews on listed specific as well as, the ability to perform resolution reviews while operators call for service on issues. Our client now has a robust and user friendly user interface that allows them to qualify issues sooner, meaning fewer problems getting into Production. The client now has the ability to perform manual reviews on listed specific as well as, the ability to perform resolution reviews while operators call for service on issues.

THE TESTIMONIAL

"I have been working with them for years dating back to ERP from 2004. They are outstanding. They have an amazing ability to provide talent very quickly in many technology areas. They are also very easy to work with on any items requiring attention from a partner management perspective. Honestly, they have been prolific at sourcing across technologies. We've used them for WebSphere, DB2 and other spaces. They really have a robust engine and network and they started to dominate some of our staffing because they are so responsive."
